

What is **Bioptic Driving?**

Bioptic Driving is a method that uses both the driver's general vision and intermittent vision through a small telescopic system to improve the sharpness of the driver's vision. The Bioptic telescope is only used to do quick spotting as required to read a traffic sign, check a distant traffic light, or check events far down the road.

Office of Vocational Rehabilitation

Bioptic Driving Program

Let's Get to Work!

The ultimate goal of the Bioptic Driving Program is to assist eligible individuals in obtaining a bioptic driver's license, primarily to facilitate transportation to work. Bioptic Driving evaluation and training is available through the Office of Vocational Rehabilitation.
